

Waste Management and Renewable Energy

“Shit Happens”

Ponds

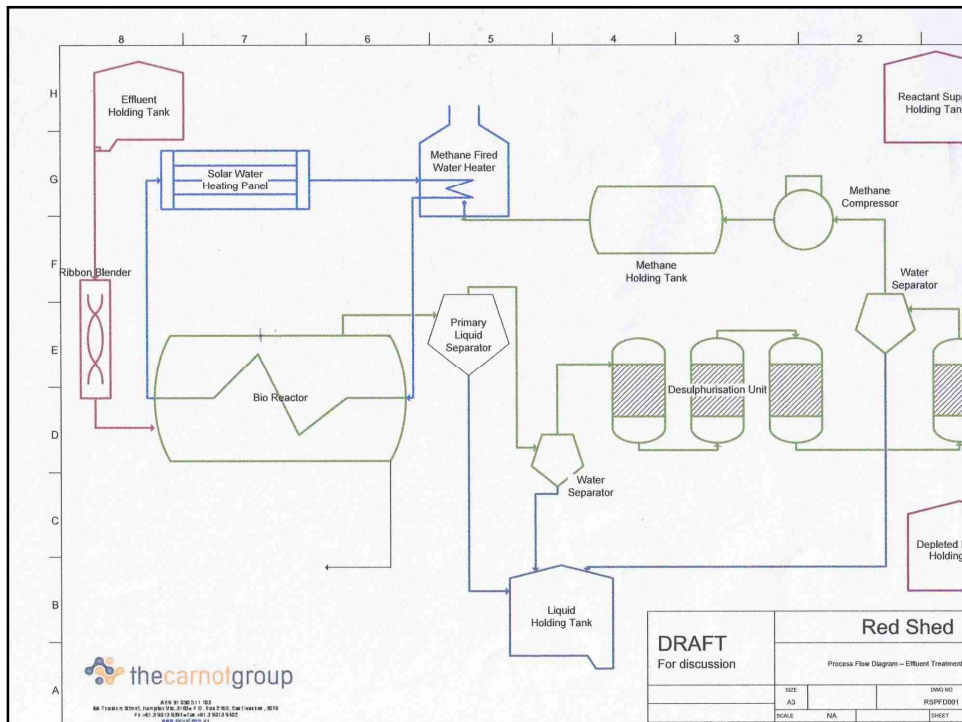

Food production must expand
to feed the world

But we must

- Smaller holdings must be able to concentrate intensive animal production on reduced areas
- Better manage waste
- Manage carbon emissions
- Reduce odours
- Manage waste water

Red Shed Renewables Biogas Plants

- Controls methane emissions
- Reuse waste - water to prevent underground contamination
- Allows IAP facilities to increase returns / square meter through reduced costs
- Supplement existing gas and electricity supplies through methane conversion
- Provide additional income from the sale of high value carbon by-products

What's next?

- Final designs to satisfy governments
- Install at Kyogle
- Monitor outputs
- Market release Jan 08
